CLAIM AMENDMENTS

1. *(PREVIOUSLY PRESENTED)* A method for utilizing an interface client in an interface roaming network for displaying content on the interface client via a wireless device, comprising:

submitting information about the interface client along a first wireless communication path to the wireless device in proximity of the interface client, wherein the information about the interface client includes at least information about display capabilities of the interface client;

determining that the interface client is usable to display the content based at least on the information about the display capabilities of the interface client;

receiving the content along a second wireless communication path from a remote source and conveying the content via the wireless device to the interface client along the first wireless communication path; and

displaying the content on a display of the interface client.

2. *(PREVIOUSLY PRESENTED)* The method of claim 1, further comprising receiving a signal from the wireless device when the wireless device is in proximity of the interface client prior to submitting the information about the interface client to the wireless device.

3. *(PREVIOUSLY PRESENTED)* The method of claim 2, wherein the signal from the wireless device is transmitted from the wireless device in response to a prior signal transmitted from the interface client.

4. *(PREVIOUSLY PRESENTED)* The method of claim 2, wherein the signal from the wireless device includes information identifying a user of the wireless device.

5. *(PREVIOUSLY PRESENTED)* The method of claim 1, wherein the information about the interface client includes at least one of: information about the capabilities of the interface client, information about an input device of the interface client, and information about the location of the interface client.

6. *(PREVIOUSLY PRESENTED)* The method of claim 1, wherein the remote source is an infrastructure server.

7. *(CANCELLED)*

8. *(PREVIOUSLY PRESENTED)* The method of claim 1 further comprising formatting the content based on the submitted information about the interface client.

9. *(PREVIOUSLY PRESENTED)* A system for utilizing an interface client in an interface roaming network for displaying content on the interface client via a wireless device, comprising:

the interface client adapted for submitting information about the interface client along a first wireless communication path to the wireless device in proximity of the interface client, the interface client having a display adapted for displaying the content received by the interface client along the first wireless communication path, wherein the information about the interface client includes at least information about display capabilities of the interface client; and

a remote source, adapted to determine that the interface client is usable to display the content based at least on the information about the display capabilities of the interface client;

the wireless device adapted for receiving the content along a second wireless communication path from the remote source and conveying the content to the interface client along the first wireless communication path;

wherein one of the interface client, the wireless device and the remote source is adapted to format the content based on the submitted information from the interface client.

10. *(PREVIOUSLY PRESENTED)* The system of claim 9, wherein the interface client has a transceiver adapted for receiving a signal from the wireless device when the wireless device is in proximity of the interface client prior to submitting the information about the interface client to the wireless device.

11. *(PREVIOUSLY PRESENTED)* The system of claim 10, wherein the signal from the wireless device is transmitted from the wireless device in response to a prior signal transmitted from the transceiver of the interface client.

12. *(PREVIOUSLY PRESENTED)* The system of claim 10, wherein the signal from the wireless device includes information identifying a user of the wireless device.

13. *(PREVIOUSLY PRESENTED)* The system of claim 9, wherein the information about the interface client includes at least one of: information about the capabilities of the interface client, information about an input device of the interface client, and information about the location of the interface client.

14. *(PREVIOUSLY PRESENTED)* The system of claim 9, wherein the remote source is an infrastructure server.

15. *(CANCELLED)*

16. *(CANCELLED)*

17. *(PREVIOUSLY PRESENTED)* A computer program product for utilizing an interface client in an interface roaming network for displaying content on the interface client via a wireless device, comprising:

a computer usable medium having:

computer readable program code for submitting information about the interface client along a first wireless communication path to the wireless device in proximity of the interface client, wherein the information about the interface client includes at least information about display capabilities of the interface client;

computer readable program code for determining that the interface client is usable to display the content based at least on the information about the display capabilities of the interface client;

computer readable program code for receiving the content and recognizing the content as data from a remote source; and

computer readable program code for displaying the content on a display of the interface client.

18. *(CANCELLED)*

19. *(PREVIOUSLY PRESENTED)* The computer program product of claim 17, wherein the computer readable program code for recognizing the content as data from a remote source further includes computer readable program code for recognizing the content as data conveyed from the remote source to the wireless device along a second wireless communication path and from the wireless device to the interface client along the first wireless communication path.

20. *(PREVIOUSLY PRESENTED)* The computer program product of claim 17 further comprising computer readable program code for formatting the content based on the submitted information about the interface client.
